Functional Previous corporate Training Expertise

Worked as an established trainer in the areas of Psychographic services for competency assessment, Brain Mapping, Intelligence profiling, & competency development. I am a trained assessor having had a wide experience of assessment center & my clientele includes very senior professionals including CEO & Managing Directors. I have been offering personality clinic services over the years that add to the quality & the gravity of human performance.

As a core consultant in the ambitious social HR project of Intelligence School. The project seeks to drive people out of the complexes of nonformal education.

My social perspective of collective human growth is based on the fact that whereas the accumulation of knowledge is expensive the application of knowledge also known as intelligence is experiential. Since majority of the schools do not teach intelligence all those who could not go to school have actually not lost much factually. My efforts are therefore, to create consciousness for intelligence & the intelligence profile than the academic performance. I am the prime messenger of the Intelligence School "To be educated is to be competent".

Involved in **Research & Development** for major Human creation technologies and acted as a central research person for four major publications of Personality Clinic. The areas of research were

1. Process child
2. Tools for total personal intelligence
3. Psycho dynamics of intelligence
4. Evolution of Competency Model

Training & Camps for Children

1. Making Best of childhood
2. Making Of scientist
3. Making of artist
4. Intelligence certification programs for the age 8-18
5. Career workshops
